## PROJECTS(PORTFOLIO)

---

### TRAINING PROJECT (FINAL PROJECT)

#### Hi Service website

Our app will help people to find a nearby service or profession, so as a user I have small issue in My house electricity, so I will open the app and I will search for services

#### The technology used in the project:

- Express Node.js as a backend
- postgres as a database
- As a frontend (HTML, CSS,React.js, Redux)

### TRAINING PROJECT

#### Food website

Amazing food website in this website I used HTML and pure CSS to build a beautiful website, this website contains five sections and is deployed by using netlify service.

#### The technology used in the project:

- Express Node.js as a backend
- Postgres as a database
- As a frontend (HTML, CSS,React.js, Redux)

## TRAINING PROJECT

### E-commerce website

Online shop created a dashboard for the admins and for the users. The user can browse the products and add them to a cart or favorite list. The admin can browse the products and add products, delete, update the website

### The technology used in the project:

- HTML Pure CSS
- React js
- Express Node js
- postgres as a database
- GitHub pages
